- Ventilation and filtration systems recommendations for post-Covid-19 buildings reopening and operation
- Cost effective HVAC systems upgrades and enhancements for improved occupant comfort and energy efficiency of operation
- Current code requirements for ventilation, filtration, and energy efficiency of operation.

SESSION 2

10:45 AM - 11:45 AM

Developing a Culture of Safety

Andy Bull – President, CH Bull

Many times when teaching a class I ask the question, “Who here is the safety officer or is on a safety committee?” A Few hands are raised and many point to the safety officer. It is at that time I announce that they all have been promoted, because you are the person most responsible for your safety.

When it comes to safety we get words thrown around like - accountability, responsibility, and developing a culture of safety. If we have a culture of safety what does that picture look like? In our time together we will go over a number of things that I've experienced personally in my years working in the area o Safety. Why is SAFETY so important? It is because it can damage our assets like buildings, cars and equipment. We hear that safety is number one, but many times the hardhat stickers and posters don't demonstrate what we see happening every day. SAFETY cannot be a “do as I say, not as I do” program. If there is going to be a culture of safety at your place of business, you have to start at the top with a commitment. Each level of people below the top hats has to “Buy In” until it permeates every aspect of your company and personnel.

SESSION 3

10:45 AM - 11:45 AM

How to Choose the Right Tree Company for your Commercial Property

Adam Jense – District Manager, The Davey Tree Expert Company
